

YOGESH MEHRA

Java Backend Developer | Java | Spring Boot | Microservices | REST APIs

Uttarakhand, India | +91-9675580388 | yogeshmehra.mehra1@gmail.com | github.com/YogeshMehra1 | linkedin.com/in/yogesh-mehra-dev

SUMMARY

Results-driven Java Backend Developer with 3.8 years of experience designing and delivering scalable, high-performance backend systems using Java (8 & 17), Spring Boot, and Microservices architecture. Demonstrated impact on high-concurrency government and enterprise platforms — supporting 20,000+ concurrent users, cutting API response times by ~35% through Redis caching, and improving PostgreSQL query performance by ~40% via JPA/Hibernate tuning. Skilled in REST API design, event-driven systems with Apache Kafka, Spring Security/JWT-based authentication, and production support, with a strong focus on writing clean, reliable, and efficient backend code.

TECHNICAL SKILLS

Backend & Core: Java (8, 17), Spring Boot, Spring MVC, Spring Data JPA, Spring Security, Hibernate, REST APIs

Microservices & Messaging: Microservices, Apache Kafka, Multithreading, Design Patterns, SOLID Principles

Databases & Caching: PostgreSQL, MySQL, Redis, SQL Optimization

Cloud & DevOps: AWS (S3, EC2), Docker, Git, GitHub Actions, Maven, Swagger/OpenAPI, Postman

Testing & Tools: JUnit 5, Mockito, Agile Scrum, Production Support, RCA

Frontend Exposure: React.js, JavaScript, HTML5, CSS3, Bootstrap

EXPERIENCE

Associate Consultant, Java Backend Developer — Infosys Limited, Pune

Nov 2025 – Mar 2026

Project: Revenue & Invoicing Platform

- Built backend microservices for invoice generation using Java 17 and Spring Boot, following REST API best practices across 3+ internal service consumers.
- Configured Apache Kafka consumers for asynchronous payment notifications, cutting downstream event-processing latency by roughly 30%.
- Integrated Redis caching on read-heavy invoice-template and configuration endpoints, cutting average response time by roughly 35% under peak load.
- Wrote unit and integration tests with JUnit 5 and Mockito and deployed services to staging environments using Docker.
- Contributed supporting React.js modules for revenue/refund tracking, secondary to core backend work.

Junior Software Developer — Haryana Knowledge Corporation Ltd (HKCL), Panchkula, Haryana

Jul 2022 – Oct 2025

State Examination Management System

- Built end-to-end backend modules for candidate registration and admit card processing (Java 8, Spring Boot), supporting 20,000+ concurrent users during peak exam windows.
- Diagnosed and resolved PostgreSQL performance bottlenecks by analyzing execution plans and tuning slow-running queries via JPA/Hibernate, cutting average query time by roughly 40%.
- Provided production support during peak exam seasons, maintaining 99.5% uptime and reducing recurring incident volume through root-cause fixes.
- Wrote unit and integration tests with JUnit 5 and Mockito for registration and admit-card modules.
- Used Git, Maven, and Agile Scrum practices to consistently meet strict government compliance deadlines.
- Built supporting React.js UIs for exam scheduling and result publication, secondary to backend development, serving 20,000+ candidates across desktop and mobile.

Citizen Services & Application Processing Portal

- Developed secure REST APIs for online document verification with Spring Security and JWT-based RBAC, serving 15,000+ citizen applications.
- Integrated AWS S3 for scalable storage and retrieval of citizen application documents.
- Refactored legacy monolithic logic into modular components using Java Streams and Lambdas, cutting duplicate code by roughly 25%.
- Documented 15+ REST endpoints with Swagger/OpenAPI and used Postman for API testing, cutting integration handoff time with other government service teams by roughly 20%.

KEY ACHIEVEMENTS

- Cut API response time by ~35% on high-traffic invoicing endpoints via Redis caching.
- Supported 20,000+ concurrent users during peak exam windows with zero critical downtime.
- Cut PostgreSQL query execution time by ~40% through JPA/Hibernate query tuning.
- Decoupled invoicing workflows via Kafka-based event-driven processing, improving fault isolation.

EDUCATION

Bachelor of Technology (B.Tech), Computer Science & Engineering

Uttarakhand Technical University | 2016 – 2020
