

YOGESH MEHRA

Java Full Stack Developer | Java | Spring Boot | React.js | Microservices | REST APIs

Haldwani, Uttarakhand | +91-9675580388 | [Email](#) | [GitHub](#) | [LinkedIn](#) | [Portfolio](#)

SUMMARY

Results-driven Java Full Stack Developer with 3.8 years of experience designing and delivering scalable, high-performance backend systems and their frontend interfaces using Java (8 & 17), Spring Boot, Microservices architecture, and React.js. Demonstrated impact on high-concurrency government and enterprise platforms — supporting 20,000+ concurrent users, cutting API response times by ~35% through Redis caching, and improving PostgreSQL query performance by ~40% via JPA/Hibernate tuning. Skilled in REST API design, event-driven systems with Apache Kafka, Spring Security/JWT-based authentication, and end-to-end feature delivery, with a strong focus on writing clean, reliable, and efficient code.

TECHNICAL SKILLS

Backend & Core: Java (8, 17), Spring Boot, Spring MVC, Spring Data JPA, Spring Security, Hibernate, REST APIs

Frontend Development (2+ Yrs Exp): React.js, JavaScript, HTML5, CSS3, Bootstrap

Microservices & Messaging: Microservices, Apache Kafka, Multithreading, Design Patterns, SOLID Principles

Databases & Caching: PostgreSQL, MySQL, Redis, SQL Optimization

Cloud & DevOps: AWS (S3, EC2), Docker, Git, GitHub Actions, Maven, Swagger/OpenAPI, Postman

Testing & Tools: JUnit 5, Mockito, Agile Scrum, Production Support, RCA

AI Tools & Productivity: GitHub Copilot, Cursor IDE, ChatGPT/Claude (AI-assisted coding), OpenAI API, LLMs

EXPERIENCE

Associate Consultant, Java Backend Developer — Infosys Limited, Pune Nov 2025 – Mar 2026

Project: Revenue & Invoicing Platform

- Built and deployed backend microservices for invoice generation to production using Java 17 and Spring Boot, following REST API best practices across 3+ internal service consumers.
- Configured and ran Apache Kafka consumers in production for asynchronous payment notifications, cutting downstream event-processing latency by roughly 30%.
- Integrated Redis caching in production on read-heavy invoice-template and configuration endpoints, cutting average response time by roughly 35% under peak load.
- Wrote unit and integration tests with JUnit 5 and Mockito and containerized services with Docker for production-ready deployment.
- Built and maintained React.js modules for revenue/refund tracking, contributing to both backend APIs and their frontend consumption.

Junior Software Developer — Haryana Knowledge Corporation Ltd (HKCL), Panchkula, Haryana Jul 2022 – Oct 2025

State Examination Management System

- Built and deployed end-to-end backend modules to production for candidate registration and admit card processing (Java 8, Spring Boot), supporting 20,000+ concurrent users during peak exam windows.
- Diagnosed and resolved production PostgreSQL performance bottlenecks by analyzing execution plans and tuning slow-running queries via JPA/Hibernate, cutting average query time by roughly 40%.
- Provided production support during peak exam seasons, maintaining 99.5% uptime and reducing recurring incident volume through root-cause fixes.
- Wrote unit and integration tests with JUnit 5 and Mockito for registration and admit-card modules.
- Used Git, Maven, and Agile Scrum practices to consistently meet strict government compliance deadlines.
- Built and maintained React.js UIs for exam scheduling and result publication as a core part of the full-stack delivery, serving 20,000+ candidates across desktop and mobile.

Citizen Services & Application Processing Portal

- Developed and deployed secure REST APIs to production for online document verification with Spring Security and JWT-based RBAC, serving 15,000+ citizen applications.
- Integrated AWS S3 for scalable storage and retrieval of citizen application documents.
- Refactored legacy monolithic logic into modular components using Java Streams and Lambdas, cutting duplicate code by roughly 25%.
- Documented 15+ REST endpoints with Swagger/OpenAPI and used Postman for API testing, cutting integration handoff time with other government service teams by roughly 20%.

KEY ACHIEVEMENTS

- Supported 20,000+ concurrent users during peak exam windows with zero critical downtime.
- Decoupled invoicing workflows via Kafka-based event-driven processing, improving fault isolation.
- Earned the Agentic AI Certified Foundations Associate certification from Oracle (September 2026).

PERSONAL PROJECTS

Food Delivery Platform (Java, Spring Boot, Kafka, Redis, WebSocket)

- Built an enterprise-grade food delivery platform using Spring Boot microservices with real-time order tracking, secure payments, Kafka-based event streaming, Redis caching, and WebSocket support.

Resume Analyzer AI (Spring Boot, Spring AI, Google Gemini, Apache Tika, Thymeleaf)

- Built an AI-powered resume analysis app using Spring Boot and Spring AI integrated with Google Gemini, extracting resume text via Apache Tika and returning ATS score, strengths, weaknesses, keyword gaps, and improvement suggestions.

Salon Booking Microservices Platform (Spring Boot, Kafka, Redis, PostgreSQL, Docker, Grafana/Prometheus/Loki)

- Designed a production-style microservices platform (API gateway, auth, salon, booking, notification services) with JWT security, Kafka event publishing, Redis caching, Flyway-managed PostgreSQL, and a full observability stack (Grafana, Prometheus, Loki) via Docker Compose.

EDUCATION

Bachelor of Technology (B.Tech), Computer Science & Engineering

Uttarakhand Technical University | 2016 – 2020
